Dundee DD1 4HN, Scotland

August 7, 2014

## 1 Introduction

The goal of recomputation<sup>1</sup> is to follow the recompilation manifesto<sup>2</sup> and make computational experiments recomputable by providing tools and a repository to store experiments in. The mission is stated as:

If we can compute your experiment now, anyone can recompute  
it 20 years from now

One of the considerations perhaps under considered in regards to recomputation to date is the ethical implications.
